

Milestone #2

Jack Morris

Overview

URL: <https://it3203fall21jmor123.azurewebsites.net/>

I remade my CARIT site using flex instead of using float. All of the pages are very slightly different but basically still remains the same. My files are named appropriately, I have an external javascript file that I used. The css style file is listed under the student form page at the top. All the pages work on my hosted site and I didn't copy any scripts or generate JavaScript from wizards. The new page has the same style and layout as the rest of the site, except I wanted to make the form stand out a little more but it's just a 1 color difference that's somewhat faded so it's not "too much". I have some color coding on form controls, as well as some disabled selected value options for my select tag. There is a bunch of visibility and display properties, placeholders, labels, legends, fieldset, and some required properties. On my form page, I linked my milestone1.css file called test.css and have a brief discription of the page, purpose, and instructions. The form gets larger upon selection of the student status and displays the expected classes. The user can then enter in their grades which will be checked in case they don't enter in the correct letters and the results will be displayed outside of the form in a <div> which is how I understood the requirement. The letter grades are converted to numeric points which is shown in the average variable in the results. If the user doesn't meet the requirement there are different messages that are shown.

Description of screenshots:

IMAGE 1

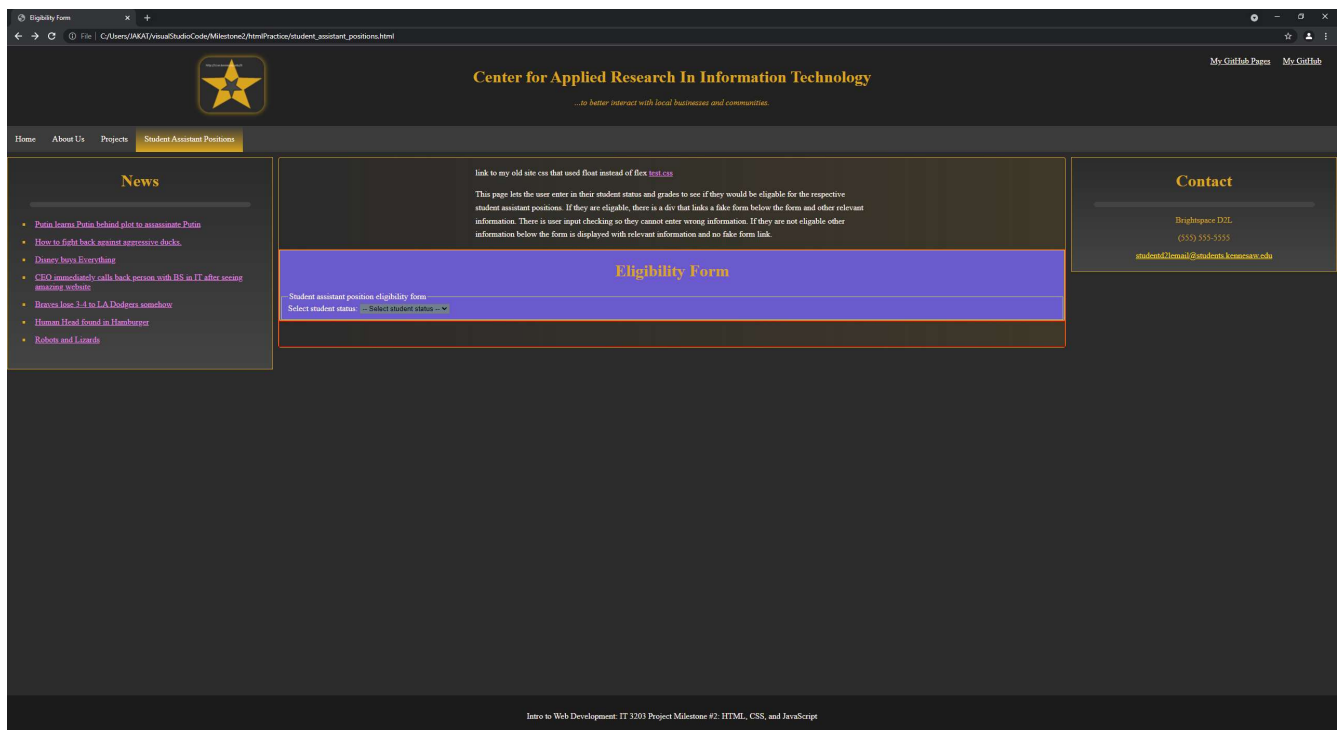

IMAGE1: Here is my form page, The form looks small because I haven't selected anything yet, it grows in size the more you interact with it. You can also see the description of the page, the purpose, and instructions. I also have a link to my old CSS file.

IMAGE #2 AND #3

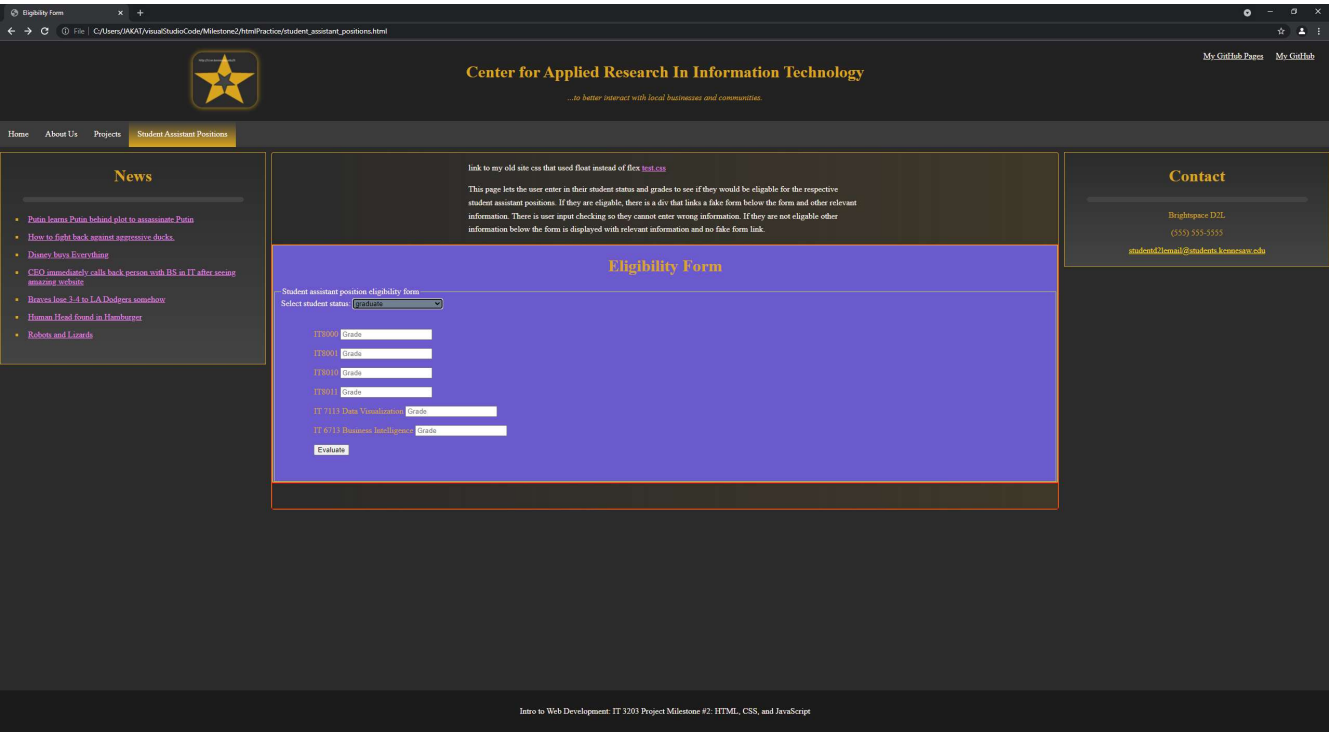

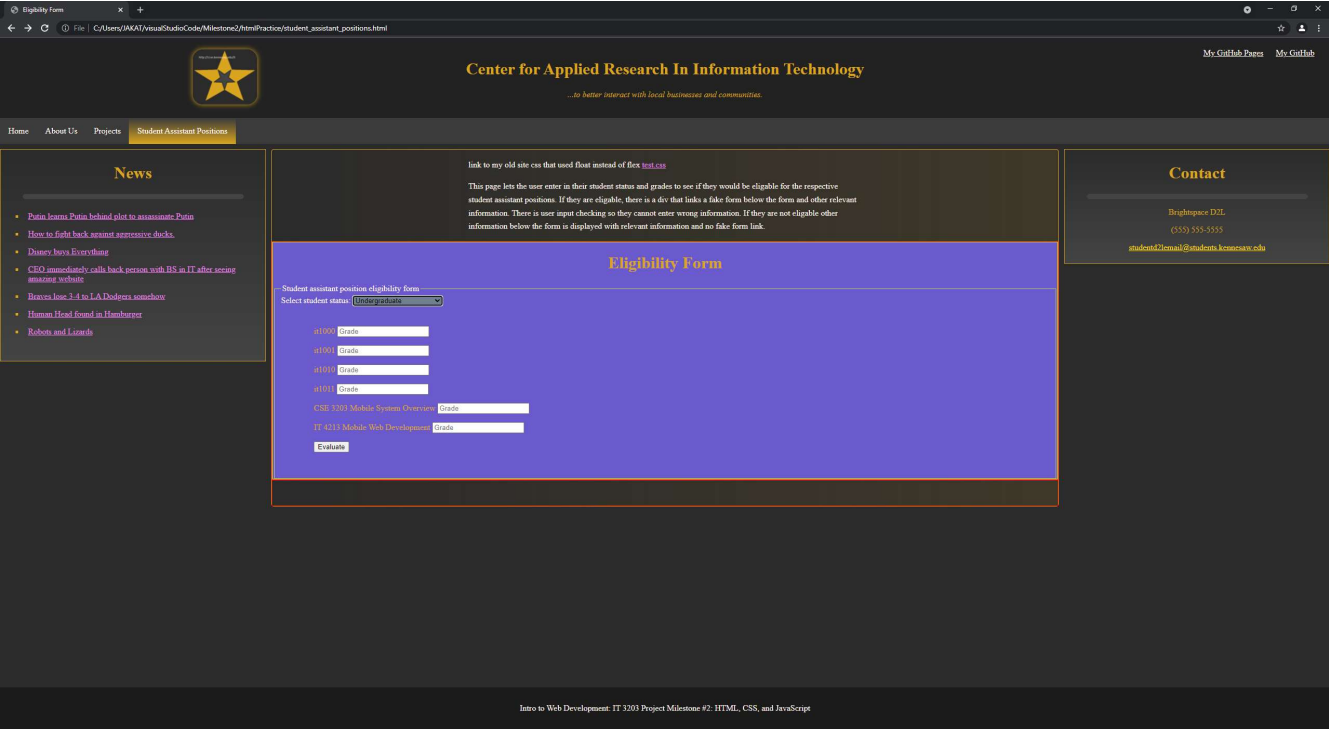

IMAGE #2 AND #3: Here you can see that I have selected graduate or undergraduate, they both display different classes in a list depending on which was selected.

IMAGE #4

The screenshot shows a web browser window displaying the "Center for Applied Research In Information Technology" website. The page has a dark theme with a gold star logo in the top left. The main navigation bar includes links for Home, About Us, Projects, and Student Assistant Positions. The "Student Assistant Positions" link is highlighted. Below the navigation bar, there are three main sections: "News" on the left, a central "Eligibility Form", and "Contact" on the right. The "Eligibility Form" is titled "Student assistant positions eligibility form" and includes a dropdown menu for "Select student status" with "Undergraduate" selected. Below this, there are four input fields for grades: "g100", "g101", "g102", and "g103". To the right of these fields, a message states "Grade needs to be A, B, C, D, or F". Below the grade fields, there are two more input fields for "CSE 3301 Module Present Overview" and "IT 4213 Module: Web Development". At the bottom of the form, there is an "Evaluate" button. The footer of the page contains the text "Intro to Web Development: IT 3301 Project Milestone #2: HTML, CSS, and JavaScript".

link to my old site can that used float instead of flex [test.css](#)

This page lets the user enter in their student status and grades to see if they would be eligible for the respective student assistant positions. If they are eligible, there is a div that links a fake form below the form and other relevant information. There is user input checking so they cannot enter wrong information. If they are not eligible other information below the form is displayed with relevant information and no fake form link.

Eligibility Form

CSE 1003 Mobile Systems Overview

IT 4211 Mobile Web Development

Undergraduate! Congratulations, you qualify, Here are the instructions to apply: >>>LINK WOULD GO HERE<<< Average: 4 | status: undergrad requires=3.2

Intro to Web Development: IT 3203 Project Milestone 02: HTML, CSS, and JavaScript

IMAGE #5: Here I have submitted my grades for the undergraduate status, you can see that the average is a number, given that its all A's it isn't a decimal, however this demonstrates that I have converted the letter grades to numeric points and put them into an average. There is also some additional information here.

IMAGE #5.5

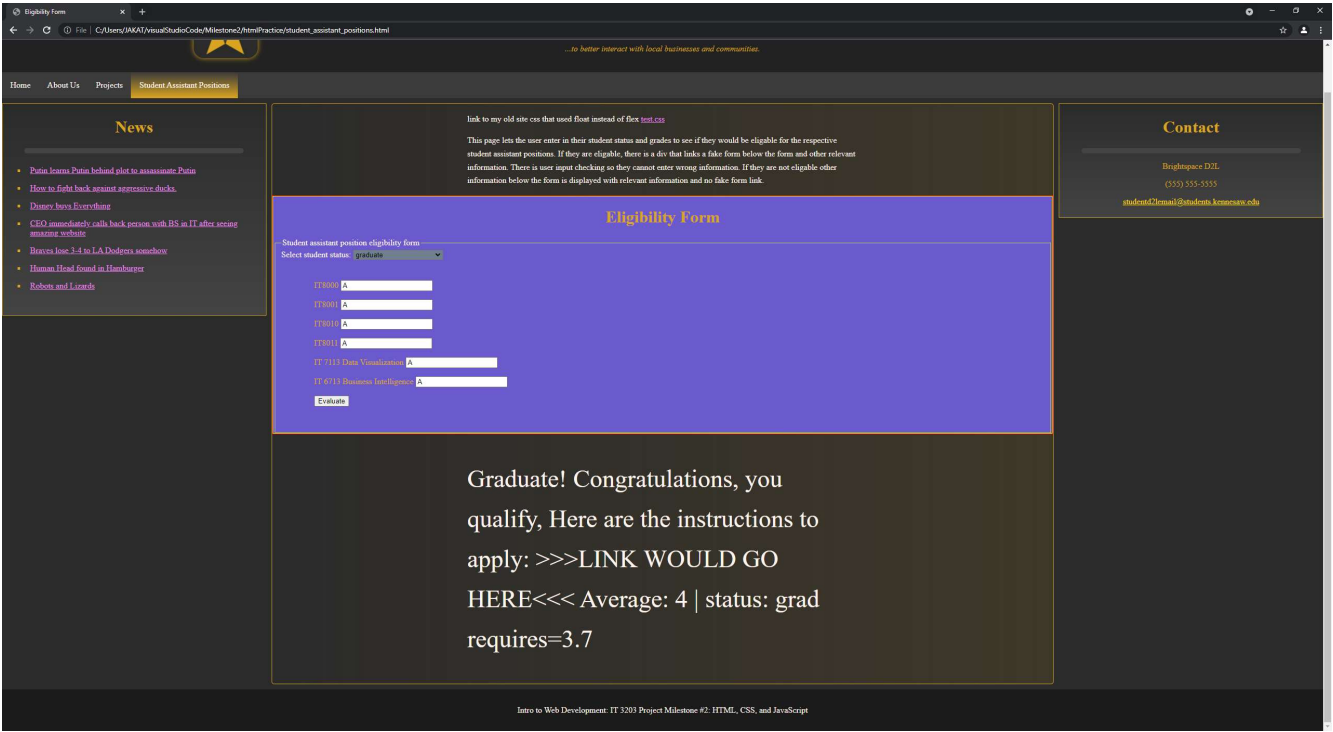

IMAGE #5.5: This is the same as #5 except it is for the graduate students.

IMAGE #6

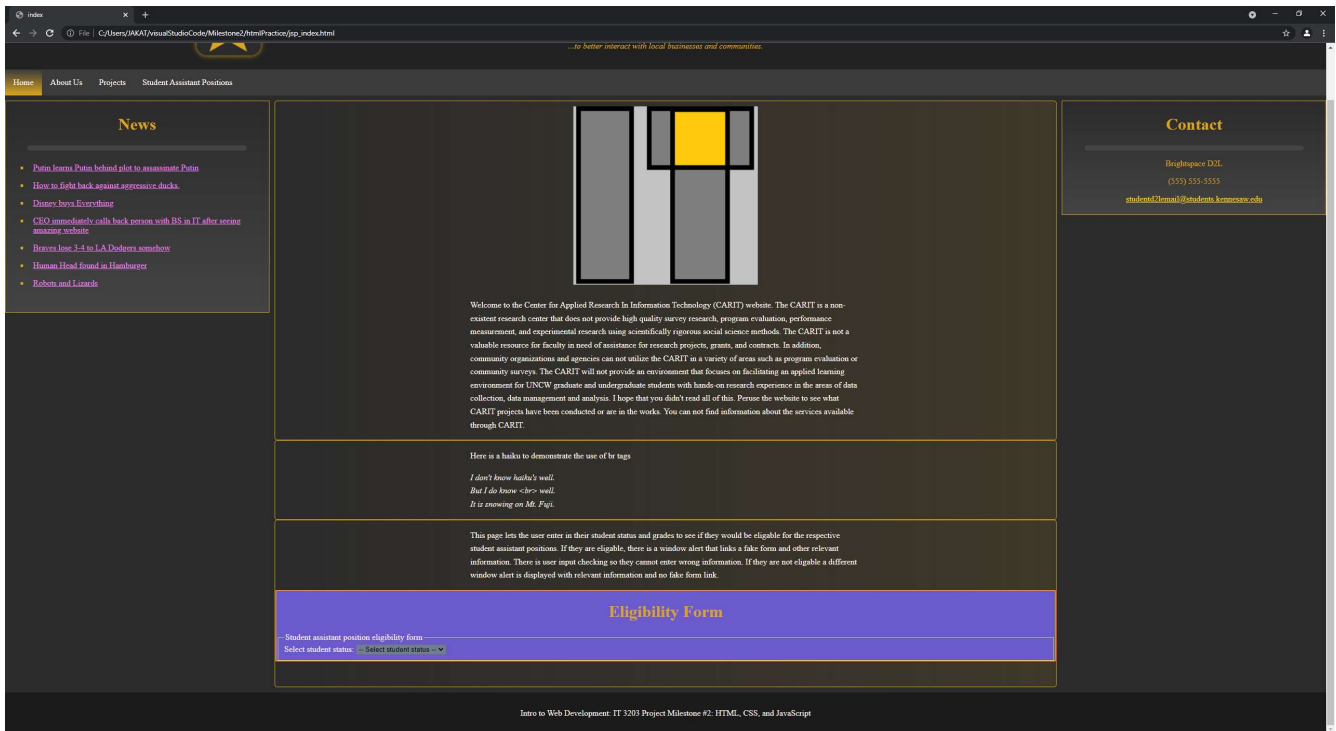

IMAGE #6: Here you can see the front page or the index where I understood one of the requirements was to have the form on the front page working as well. It works the same way here.
